

# The Valve Museum

---

## Updates April 2019

Jeremy Harmer has donated a large quantity of valves to the museum that were collected on April 1<sup>st</sup>. It was no joke - they completely filled the car. Something new to me was the Graphecon from Thomson CSF. A PDF article on memory tubes has been added to the Storage CRT article (art-096) as well as the Graphecon exhibit.

We have some more photographic exhibits sent in by Mark Mallison.

Looking at Emilio Ciardiello site (referenced from the collections page) I came across his article on Radar tube development – very interesting.

Added 121 new exhibits taking the count from 5570 to 5691

Added 1 boxes  
box337 – AWV AV44

Added new maker AWV  
Added new maker Federal
