

TRIOTRON

TYPE

Universal Rectifier

G. 2080.

Operating Data.

Heater Current ..	0.2A
Heater Voltage ..	20 V.
Max. permissible Anode Voltage	250 V.
Max. Anode Current	80mA.
Max. permissible Voltage between Cathode and Heater	300V.

*Standard 5-pin or side-
contact base.*

Application.

Indirectly heated Half-wave Rectifier for Universal receivers. The low internal resistance of this valve makes it possible to design efficient AC/DC circuits. Care should be taken that the maximum Anode voltage is not exceeded under any circumstances. When followed by very high smoothing Capacities, the valve should be protected by a Series resistance in the Anode lead.
