

Tube
H412

High Frequency amplifier

Type H 412

(RD 4)

Average Characteristics:

Filament voltage	V_f	= 4 Volts
Filament current	I_f	= 0.075 Amp.
Max. Anode voltage	$V_a \text{ max.}$	= 150 Volts
Slope	S	= 1.2 mA/V
Amplification Factor	μ_n	= 9
Impedance	R_i	= 7,500 Ohms

Type H 412 is an excellent valve for tuned HF and for Detector stages. When used as Detector 0.0002 Grid condenser and 0.5 — 2 Megohm Grid leak are recommended.
